RPG Maker VX Ace Script: It is not possible to use the above resources without the accompanying script. Description:

GGxrd is a simple, fast, stable game engine to easily run your own games. If your idea of gaming is just getting online, playing against bots, or just generally fooling around with graphics using the fancy stuff (one of my fondest memories of school was using my buddies powerpoint presentation program to make all these fancy animations), GGxrd is going to be just fine for you. Creating a game is pretty simple, you just have to supply a Themes/Scenes/Levels/Tanks/etc. file and follow the prompts to get your game started. There are some more advanced options like shader programming, custom pixel sizes, as well as some more complex features like video playback and rendering to a texture. Make sure to check out the README or documentation if you are looking for anything more in-depth.
